Instruction Manual: Aeroforce Spacecraft

Problems and emergencies - level 1

Pocket edition – revised and updated.

Specific spacecraft information can be entered below:

Spacecraft identification number																
3	3	5	0	0	-	0	0	1	2	2	-	5	5	5	8	2

Spacecraft information	
Maximum Thrust (Force):	280 tonnes (2,750 kN)
Engine Mass (Weight):	910 kg
Pressure from the Chamber:	350 bar (35 MPa)

PE Number	type of service for the spacecraft
2XT	Preventive and corrective maintenance and servicing

notes:

The inspection was carried out on:	Delivery date:

Thank you very much for your trust!

With this Aeroforce, you are acquiring a modern, high-tech spacecraft, equipped with a variety of amenities to ensure comfort during your expeditions.

Before using it for the first time, please read and observe the information provided in this instruction manual. This will help you quickly and comprehensively understand your spacecraft, as well as recognize and avoid potential hazards and common issues.

Should you have any further questions about your spacecraft, or if you feel this manual is incomplete, please contact the Aeroforce support center. We always welcome your questions, concerns, suggestions, and feedback.

We wish you great joy on your expeditions and hope that they are as comfortable as possible.

Warning:
Observe the important safety information regarding mechanical and electrical issues.

AEROFORCE SPACESHIPS

Instructions and operations

Our spacecraft are categorized based on the complexity and power level of their propulsion and control systems, as represented by their control lever configuration.

Below, we present the official AeroForce catalog, along with the pressurization lever indicators for each model as specified by the manufacturer:

- **ZX SERIES 5 Lever Spaceships:** *This is our elite line, representing the pinnacle of modernity, automation, and autonomy for deep-space missions.*
  - ZX856-B1 ▽△△
  - ZX857-B1 ▽△▽
  - ZX858-B1 △△▽
- **GY SERIES 4 Lever Spacecraft:** *Versatile and robust models, widely used for heavy-duty cargo transport and long-duration commercial missions.*
  - GY246-B1 ▽▽△
  - GY247-B1 △▽▽
  - GY248-B1 △▽△
  - GY249-B1 △▽▽
- **GX SERIES 3 Lever Spacecraft:** *Our traditional entry-level line, renowned for its reliable mechanics, ease of maintenance, and excellent response in planetary orbits.*
  - GX776-B2 ▽▽△
  - GX779-B2 △▽△
  - GX780-B2 △▽▽

1. Astronomical Spatial Calibration

When encountering a high-risk element, the spacecraft may lose its calibration due to gravitational disturbance.

Therefore, it is important that you perform the Aeroforce's astronomical calibration in the correct order.

♒ January: air, Aquarius, Saturn, and Uranus.

♓ February: water, Neptune, and Pisces.

♈ March: fire, Aries, and Mars.

♉ April: earth, Taurus, and Venus.

♊ May: air, Mercury, and Gemini.

♋ June: water, the Moon, and Cancer.

♌ July: fire, the Sun, and Leo.

♍ August: earth, Mercury, and Virgo.

♎ September: air, Libra, and Venus.

♏ October: water, Scorpio, Pluto, and Mars.

♐ November: fire, Sagittarius, and Jupiter.

♑ December: earth, Saturn, and Capricorn.

(12, 3, 2, 6, 8, 11, 5, 7)

2. Common issues with the onboard computer

2.1. Electrical failure

If your Aeroforce GX776-B2 spacecraft won't turn on, don't panic; below are some solutions that often resolve the issue without the need to contact Aeroforce support.

The first thing to check is the power box. inspect the power wire connections:

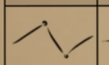

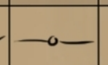

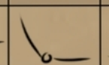

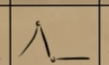

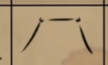

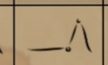

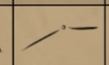

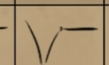

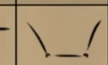

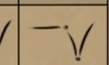

The wires should be arranged as follows:
1. The wire for port "X" cannot be connected to port "Z".
2. The wire for port "P"must be connected to a port "Z".
3. Port M cannot be connected to port "Ɛ".
4. The wire for port "♫" must be connected to either M or "Z".
5. "Z" cannot be connected to port "♫".
6. Port "Ɛ" must be connected to either port "X" or port M.
Reminder: All ports must have a connection.

2. Common issues with the onboard computer

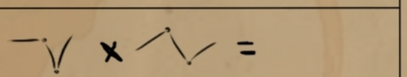

2.2 Emergency stop release

To prevent accidental contact or unexpected situations that might trigger the emergency stop button on the Aeroforce GX776-B2 spacecraft, please be advised that, by default, the button is enclosed in a protective housing.

In strictly exceptional cases where activation becomes necessary, you must first unlock it using a security code:

0	1	2	3	4	5	6	7	8	9
									

The 5 characters will be as follows:

3. Mechanical problems

3.1. Temperature switches

Your spacecraft may occasionally experience temperature-related issues.

Should this happen, do not worry, you simply need to adjust the temperature switches located in the control box near the levers.

Adjust the switches according to the instructions provided by the manufacturer on the inner base of your Aeroforce control box.

Note: If your message is in another language, please visit our user FAQ at page 11.

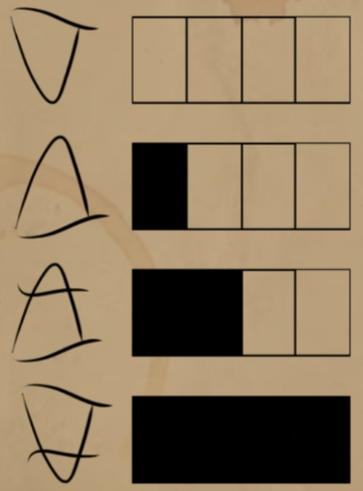

3. Mechanical problems

3.2. Pressurization levers

One issue that may arise and cause inconvenience to the user during a space expedition involves pressurization problems; these can be easily resolved by following a few simple procedures.

Depending on your spacecraft model, you may have between 3 and 5 pressurization levers; please consult the Aeroforce manual to verify the specifications for your particular model.

The levers have 4 settings, ranging from a low of 0 to a high of 100. Following the manufacturer's recommendations for your Aeroforce model (found on page 6), adjust the controls according to the parameters below:

1. Alien Languages

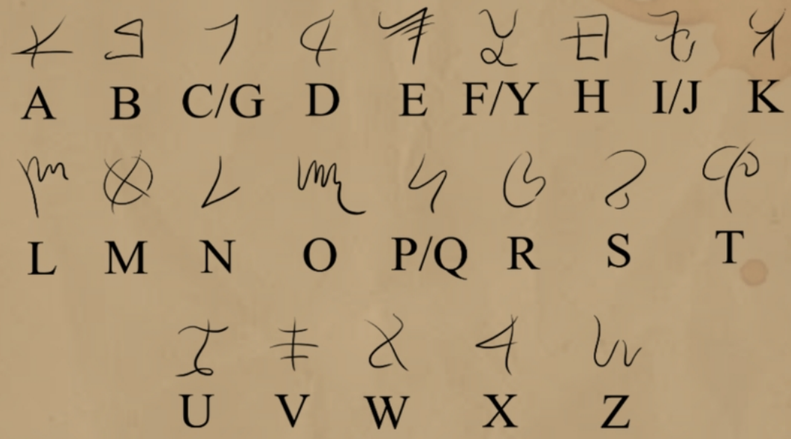

One of the most common questions we receive from Aeroforce users concerns the languages sometimes found on components manufactured by alien entities.

If you encounter translation difficulties while trying to resolve an issue, please refer to our glossary on pages 13 at 15.

Closing Protocol and Acknowledgments

Safe navigation through the cosmos requires cutting-edge technology and precision engineering—a standard highly valued by Aeroforce. With this in mind, this instruction manual - along with all flight and emergency engineering systems - was developed under the time constraints of a Game Jam, a feat made possible only through the dedication of the Firefly Team's engineering and intelligence division.

CIVIL ENGINEERING AND INTELLIGENCE CORPS (TEAM FIREFLY)

- Audio Frequencies & Communications (Music): m4kachu/Maurício.
- Graphical Interface & Digital Displays (2D Art): Vicky Peixin/Victória.
- Logic Matrix & Quantum Computing (Programming): Luciano.
- 3D Environments & Props: Jhonatan & Myrcella.

TRANSMISSIONS OF GRATITUDE (SPECIAL THANKS)

- To the Game Jam Organizers: For establishing the coordinates and the deadline for this space engineering challenge.

FINAL LOG FROM AEROFORCE:
Your systems are stable, Your thrusters are clear.
Thank you for flying with Aeroforce — Over and out.

Team Firefly
